

Bone Funnels

1. Fill a clean sink with water and detergent in accordance with detergent manufacturer's instructions.
2. Brush, wipe, agitate, jet wash, or hand spray inside diameter of tube to remove excess bone grafting material
3. Remove the bone funnel from the sink and drain any excess detergent prior to placing in a second sink to rinse in clean water.
4. Rinse the bone funnel thoroughly with clean water or jet wash gun under the surface of the water.
5. Remove and drain the bone funnel before drying, using your preferred method.
6. Sterilize in autoclave between 134°C and 138°C (max 200°C) for the duration of the machine cycle. Cycles may vary according to the regulations and/or the law in force in the country involved.
